Question 1 tests:

```java
public class PerimeterFromArea{
    public static void main(String[] args) {
        double area = Double.parseDouble(args[0]);
        double perimeter = Math.sqrt(area) * 4;
        System.out.printf("The perimeter is: %.2f",perimeter);
    }
}
```

Ln: 6, Col: 6

▶ Run   ↪ Share   56

```
The perimeter is: 29.93

** Process exited - Return Code: 0 **
```

```java
public class PerimeterFromArea{
    public static void main(String[] args) {
        double area = Double.parseDouble(args[0]);
        double perimeter = Math.sqrt(area) * 4;
        System.out.printf("The perimeter is: %.2f",perimeter);
    }
}
```

Ln: 8, Col: 1

▶ Run | ↪ Share | 25

The perimeter is: 20.00

** Process exited - Return Code: 0 **

```java
public class PerimeterFromArea{
    public static void main(String[] args) {
        double area = Double.parseDouble(args[0]);
        double perimeter = Math.sqrt(area) * 4;
        System.out.printf("The perimeter is: %.2f",perimeter);
    }
}
```

Ln: 4, Col: 48

▶ Run   ↱ Share   23

The perimeter is: 19.18

** Process exited - Return Code: 0 **
